FALL 2023
Instructions for term-project demonstration:

Due to large number of term project and our limited time, approaching the end of term, the evaluation of your term project will take place by the assessment of your term project document and a demonstration video that you should submit along with your other report into the Dropbox folder on the D2L.

The following paragraphs explain further detail about preparation of your term project video. Your video should have four parts, as follows:

First part (1 minute):
At the beginning of your video, you should introduce your team and explain briefly but clearly, which part of the implementation was done by each team member. For example, which class(es) such as Flight, Seat, Airline, Passenger was developed by which member of the team. Or you can state that you have worked all together almost equally on all classes.

Second part (1 minute):
In this part, you need to explain which one of the following requirements is implemented, and which one is not:
- Display flight seat map.
- Display passengers' information.
- Add a new passenger.
- Remove an existing passenger.
- Save data
- Quit

Third part (1 minute):
In this part, you should run you should compile your program and show that there is no compilation error.

Fourth part (7 minutes):
In this part you should run the program and show that ALL required functionalities are working.

Total Time:
MAXIMUM 10 minutes
